Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a counter, classified in class 73.
- II. Claims 6-24, drawn to a door system, classified in class 160, subclass 201.
- III. Claims 25 and 26, drawn to a tensioning tool, classified in class 185.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination of the counter has separate utility such as for use with counting revolutions of any adjustable article. See MPEP § 806.05(d).

Invention II and inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the initial claims to the door include a broader recitation of the tensioning tool and further do not include a recitation of the counter. The subcombinations have separate utility such as a

counter for counting revolutions of any adjustable article and a tension adjuster for adjusting the tension on any spring.

Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.
